Harris Side-Squeeze Shears

Efficient design gives maximum performance because of minimal material pre-processing.

Harris Side-Squeeze shears are the machines of choice for materials that don't require "trapping". The Side-Squeeze series of shears provides maximum productivity through continuous, efficient production and requires only limited maintenance due to simplicity of operation.

Side-Squeeze shears are available with throat widths of 3' to 5', with shearing forces of up to 2200 tons. The shear design on all Side-Squeeze shears is clamp-type, providing clamping forces up to 735 tons.
