

"Labor Savings Devices"

Model FRTF

REPLACEMENT TRAMPER FOOT

To Fit the Fishburne CB-400 Press

ADVANTAGES:

- *New design is double the strength of the original design by Fishburne therefore will tolerate hydraulic shock induced at top and bottom of stroke*
- *Plug welded bottom plate adds even more strength to heavy duty design*
- *Sockets for hydraulic cylinder rod and guide rods are machined from solid round bar therefore sockets have thicker bottoms and walls*
- *Dimensionally interchangeable except for height which is 1 ½" more than original. This allows tramper foot to extend further below the dogs eliminating the need to purchase a longer stroke tramper cylinder.*
